Professional Summary

AI Engineer with production experience in **Agentic AI systems**, LLM orchestration, and scalable data infrastructure. Specialized in building **multi-agent workflows (LangGraph)**, MCP server integrations, and high-throughput ETL pipelines. Proven track record deploying stateful AI Agents for financial analysis, revenue prediction, and enterprise CRM automation.

Technical Skills

Generative AI & Agents: LangChain, LangGraph, AutoGen, CrewAI, Ollama, RAG, Vectorless RAG, MCP (Model Context Protocol), Tool Calling, Context Engineering, Groq API
ML & Deep Learning: TensorFlow, PyTorch, Scikit-learn, NLP, Vector Embeddings, Prompt Engineering, LLM Evaluation & Fine-tuning
Cloud & Infrastructure: AWS (ECS, Athena, Lambda, EventBridge, Glue, DMS, S3), Docker, CI/CD Pipelines, Azure Data Factory
Data & Databases: PostgreSQL, MongoDB, Apache Iceberg, Apache Superset, Kafka, Flink, MS Business Central (OData)
Programming & Tools: Python, SQL, REST APIs, FastAPI, Flask, Pydantic, Gradio, Git, Linux

Professional Experience

Smartworks

Gurugram, India

Junior AI Engineer (Full-Time)

July 2025 – Present

- **Production Agentic SQL Chatbot:** Evolved the intern-built prototype into a production-grade **stateful AI Agent** using **LangGraph and Ollama**. Implemented advanced **tool-calling**, **state handling**, and **context engineering** to automate portfolio analysis, revenue prediction, and financial reporting with 100% SQL join accuracy.
- **CRM MCP Server:** Building a **Model Context Protocol (MCP)** server on top of the organization's existing CRM APIs, enabling LLM agents to seamlessly query, update, and automate CRM operations through standardized MCP tool interfaces.
- **Deployment & Evaluation:** Deployed agentic workflows using **Docker on AWS ECS**. Built a **structured evaluation framework** with ground-truth comparison to monitor LLM performance and maintain production reliability.
- **Enterprise Data Architecture:** Engineered high-performance production data pipelines:
 - **ERP Pipeline:** Integrated **MS Business Central** via **OData APIs** into **PostgreSQL** using **Azure Data Factory**.
 - **Analytics Pipeline:** Routed data from **DocumentDB/SQL** to **AWS DMS/S3**; orchestrated **Glue/Athena** and converted data to **Apache Iceberg** for optimized **Apache Superset** dashboards.
- **Automated Operations:** Orchestrated ETL jobs via **AWS Lambda and EventBridge** for daily data exports and webhook integrations, maintaining 100% reporting accuracy for executive portfolio sheets.

Data Science Intern (2 Internships, converted to Full-Time)

June 2024 – Sept 2024 & March 2025 – July 2025

- **SQL-RAG Chatbot Prototype:** Built an initial RAG system translating natural language to SQL queries, achieving a 40% retrieval efficiency gain—served as the foundation for the current production agentic chatbot.
- **CRM Chatbot Testing:** Conducted end-to-end testing and validation of an LLM-powered chatbot integrated with the company CRM, ensuring response accuracy and consistency across diverse query patterns.
- **Data Scraping & Structuring (Zoho):** Scraped and structured large-scale business data from **Zoho CRM APIs**, transforming raw records into clean, reporting-ready datasets for business intelligence.
- **Resume Parser & Candidate Shortlisting:** Developed an LLM-powered resume parsing tool that extracted structured candidate profiles and automated shortlisting based on job requirement matching (Demo).
- **Client Report Summarization:** Built a summarization system using **SQL** and **LLM** to auto-generate concise client reports from large datasets, reducing manual reporting effort significantly.

Projects

LLM-Powered Complaint Management System

Python, Groq API, Flask, Gradio

- Developed an automated classification platform using **Groq API** to route student complaints via an LLM decision engine; integrated **REST APIs** and SMTP for automated notification triggers.

Certifications & Achievements

Winner, Corporate Hackathon (Smartworks): Built an LLM-assisted ground-truth framework to infer ticket categories, improving training data quality for ML classifiers.

Prompt Engineering (Generative AI) Certification – Coursera

Education

Lingaya's Vidyapeeth

Bachelor of Computer Application (BCA)

Faridabad, India

2022 – 2025
